# OUR APPROACH

We work with people aged over 16 who have been impacted by an Acquired Brain Injury, Stroke, Concussion or Neurological condition.

If you are having problems undertaking every day activities that involve written or verbal communication and/or swallowing, speech pathology can help you. We can help you to do the following:

- Have a conversation or ask for help
- Eat or drink comfortably
- Participate in recreation and leisure activities
- Pay bills or fill out forms
- Read emails and use your phone
- Work or study
- Feel confident in social situations

Our team also offer modified barium swallow assessments and Lee Silverman Voice Treatment (LSVT).

Regardless of how long ago you were diagnosed or experienced your injury, our speech pathologists are here to help you communicate and participate in your usual activities.

We provide our service from our clinic based in Ashford, your home, or out in the community.

**We believe that everyone has the right to communicate and eat and drink safely and confidently.**
